

Improving quality at a high occupancy ICU

Multispecialty hospital with 13 ICU beds

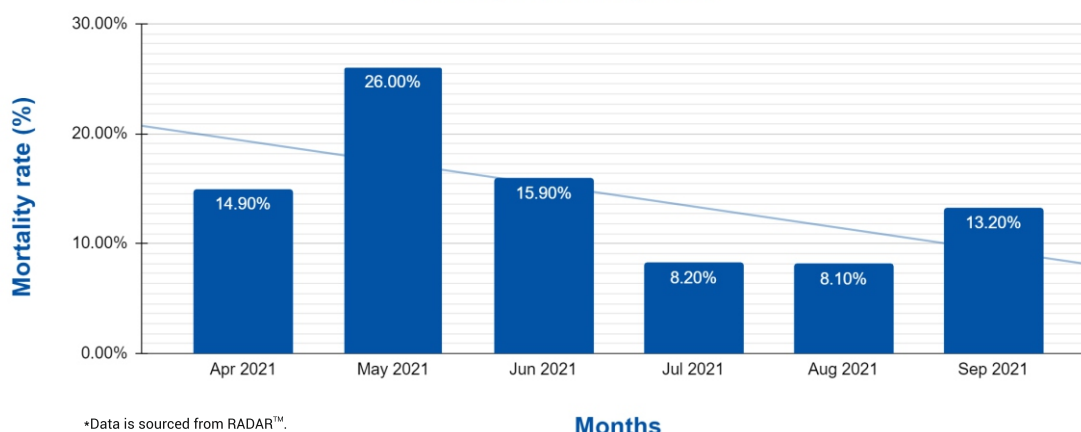

PROBLEM

With a consistently high occupancy of 80%, the hospital staff was overburdened with cases and faced quality concerns, especially during the nighttime.

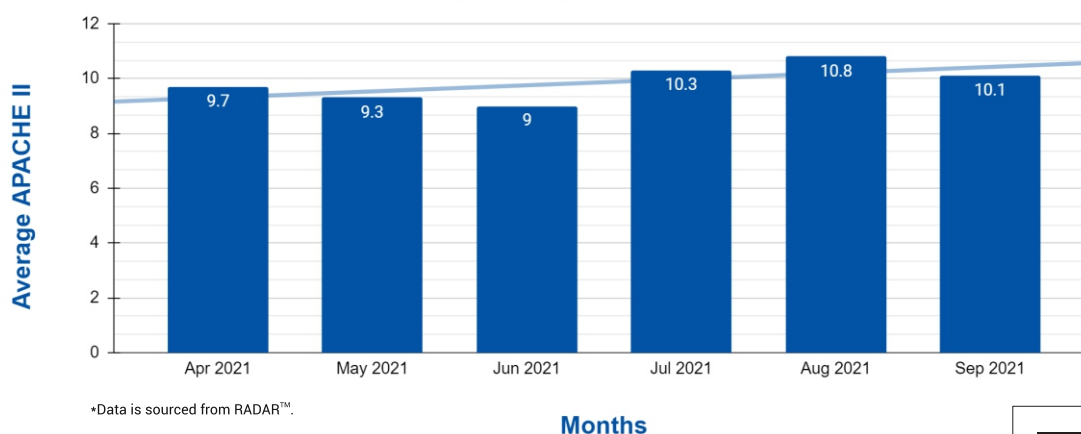

IMPACT

In under 6 months, Cloudphysician diligently worked with the hospital team to improve nighttime coverage and create protocols to steadily drive down mortality rate at the same time taking on sicker patients. Average mortality rate dropped from about 20% to 10%, while patient severity slightly increased, as calculated by APACHE II score.

Monthly mortality rate

Monthly average APACHE II
