

CLLOUDPHYSICIAN

Cloudphysician aspires to be the global virtual hospital. We are reimagining the delivery of critical care through patient-centric solutions. We use our advanced technology, designed and developed in-house, to increase access to care, all across the globe. Cloudphysician has been radically transforming delivery of critical care by impacting thousands of patients across India and enabling them to receive high quality care irrespective of their location and is moving towards mainstreaming this model globally.

Our Care Center, based in Bangalore, is staffed 24/7 by a highly qualified and trained critical care team that includes super-specialist doctors, nurses, dieticians, and pharmacologists. The clinical team uses our proprietary platform, RADAR, to connect to hospital ICUs to oversee and manage the care of critically ill patients across multiple regions. RADAR, built by our team of technology experts, incorporates automation, computer vision, real-time video, and data analytics to help expert care providers connect to and provide care to patients.

We have cared for nearly 50,000 intensive care patients across 16 states in India and saved numerous lives.

JOB DESCRIPTION

We're looking for a highly motivated, and forward-thinking UI/UX Designer to help shape the user interface and user experience of the RADAR web and mobile app. The role of a UI/UX designer is to help visualize and envision how users experience our products, by taking on complex use-cases and transforming them into intuitive, innovative, and easy to use designs. You will be a part of the Bengaluru product design team, an innovation team building the next generation of healthcare technology and human-machine interface. You will be working closely with cross-functional product teams, designers, clinical teams, developers, and management. Working as part of a small, collaborative team should be second nature, as should your constant search to improve how we do things

Key responsibilities

You will need to have strong communication skills with the ability to articulate and advocate design across teams. Your main responsibilities will include:

- Implement creative solutions that consistently and clearly communicate our brand values and design philosophy.
- Create new critical components, features and iterations of our solution
- Drive the design process from idea to implementation and everything that entails it - research, UX design, UI design and user testing of the RADAR web and mobile app. You will collaborate closely with product and engineering to create a highly efficient delivery team
- Maintain design libraries with aesthetic and functional iconography, typography, color, spacing, UI components to help users to navigate our product with ease
- Help translate product goals, balancing user-insights and engineering to create an elegant, usable and measurable user experience

- Obsess about end users with a good understanding of different research and testing methods, including when and how to use them.

PREFERRED QUALIFICATIONS

- 1 to 2 years of experience designing enterprise systems with a Bachelors or a Masters degree in design (e.g. interaction design, visual communication, product, industrial)
- Human-Computer interaction or equivalent practical experience
- Excellent visual design skills
- Working knowledge of design tools such as Figma/Sketch and animation tools to best represent concepts
- Iterative approach. Ability to move quickly from idea to validation and documenting user flows, personas and pain-points
- Experience in designing exemplary mobile interfaces for native apps (Android & iOS) is an added bonus
